What were the highlight and mane takeaways of this conference?
Our paper was presented on Wednesday, October 3 13:30 - 15:00 in the session "Adaptive networking applications" chaired by Kyong Jin Shim.

The main takeaways were around security of networks and this was evident from the keynote presentation by Klara Nahrstedt and also significant discussions on security in the panels session I attended entitled "What Blockchain offers for Networking Community".
What were the favorite sessions, any contacts you made, etc.

What were the lowlights of the conference?
Some of the session papers were not thematically grouped and therefore some sessions I attended had very shallow discussions. Other sessions for example Green networking and IoT had much livelier discussions, I successfully made contact with two researchers in USA and look forward to pursue some work with them (together with my supervisor).
What would you do differently?

How will you plan to share your learnings with the New Zealand Internet Community?
I am planning to participate in NetHui 2019 and also Australasian Computer Science Week in 2019 to disseminate the ideas we have developed in the paper. Moreover, we are also in talks with local industry partner Aviat (in Lower Hutt) and MetaSwitch (in Wellington) to explore further research opportunities.

We'd love to see some visual and audio representations of your work. Please share below.
